FIG. 4

FIG. 3

Pre RX

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The number of transformed cells was determined by the number of colonies obtained on the selective medium. The results are the mean of three independent experiments. Error bars represent standard deviation.

Figure 2

Pre RX

Figure 1 shows the results of the analysis of variance for the effect of the different factors on the response variables. The analysis of variance for the effect of the different factors on the response variables is presented in Table 1. The results show that the effect of the different factors on the response variables is significant. The effect of the different factors on the response variables is significant. The effect of the different factors on the response variables is significant.
